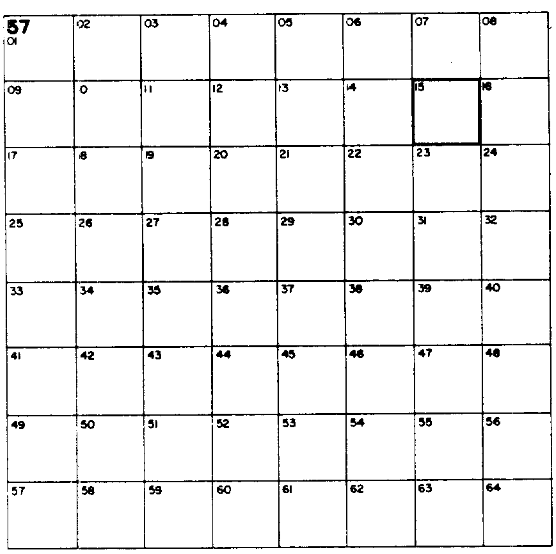
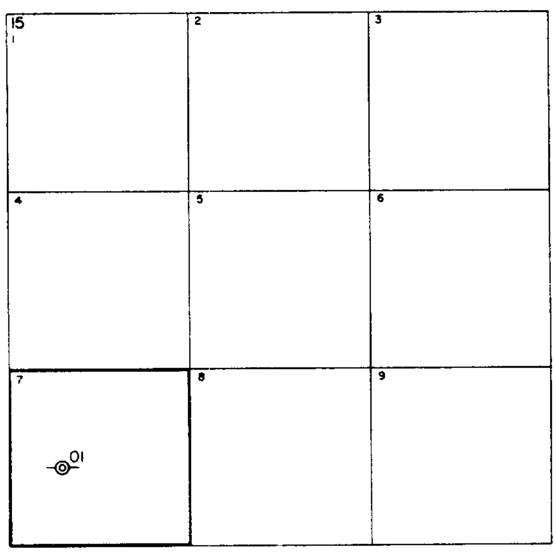
WELL-NUMBERING SYSTEM

To facilitate the location of wells and avoid duplication of well numbers, the Texas Department of Water Resources has adopted a statewide well-numbering system. It is based on division of the State into a grid of 1-degree quadrangles formed by degrees of latitude and longitude and the repeated division of these quadrangles into smaller ones as shown on the following diagram.

Each 1-degree quadrangle is divided into sixty-four 7½-minute quadrangles, each of which is further divided into nine 2½-minute quadrangles. Each 1-degree quadrangle in the State has been assigned an identification number. The 7½-minute quadrangles are numbered consecutively from left to right, beginning in the upper left-hand corner of the 1-degree quadrangle, and the 2½-minute quadrangles within each 7½-minute quadrangle are similarly numbered. The first 2 digits of a well number identify the 1-degree quadrangle; the third and fourth digits, the 7½-minute quadrangle; the fifth digit identifies the 2½-minute quandrangle; and the last 2 digits identify the well within the 2½-minute quadrangle.



7 1/2 - minute Quadrangles



2 1/2 minute Quadrangles

STATE WELL NUMBER

Each well record stored in the Ground Water Data System is identified by this unique, seven-digit number. The system allows for the numbering of up to 99 wells in each 2 1/2-minute quadrangle. The eighth space is provided for future expansion of the numbering system and will allow numbering of up to 999 wells in each 2 1/2-minute quadrangle.

Only well numbers assigned by authorized persons are accepted in the Ground Water Data System, this avoiding duplication of well numbers.

Enter seven-digit well number:

Example :

1	8	2	0	2	0	1	
1	8	2	0	2	9	9	

Enter eight-digit well number:

Example:

1	8	2	0	2	1	0	0

PREVIOUS WELL NUMBER

Enter any number previously used to identify the well. The entry may be entirely numeric or alpha-numeric.

Examples:

1	2	9	-	A			

G	2	1		1	2	9	

1	3	0	8	1	0	9	

COUNTY

Enter the numerical code for the county in which the well is located. County code is a mandatory entry; data will not be stored if this field is blank.

The Ground Water Data System utilizes "FIPS" (Federal Information Processing Standards) county codes. This system of county codes is utilized nationwide by Federal agencies. The "FIPS" codes for Texas counties are shown in Appendix B.

Alpha and numerical codes formerly used in older data systems to identify Texas counties are not applicable to this system.

RIVER BASINS AND ZONES

Texas has 23 river and coastal basins. Each basin has been subdivided into homogenous sub-areas or "zones" to facilitate presentation of information and planning analysis. Each basin contains one to six zones. See Appendix E.

LATITUDE AND LONGITUDE

The values of latitude and longitude entered in these fields are locators. They should represent the best available information about the location of the well. The location should be entered as precisely as it is known, and the accuracy of the location should be indicated by a suitable entry in the next field, accuracy of coordinates.

Latitude: Enter the best available value for the latitude of the site in degrees, minutes, and seconds. Six digits must be coded. Latitude is a mandatory entry; data will not be stored if this field is blank.

Longitude: Enter the best available value for the longitude of the site, in degrees, minutes, and seconds. Use leading zeros if needed; seven digits must be coded. Longitude in a mandatory entry; data will not be stored if this field is blank.

Accuracy of Coordinates: These codes are intended to reflect the accuracy of the latitude and longitude data. All sites inventoried in the field should be precisely located on 7 1/2-minute topographic maps and coded 1.

Enter the appropriate code indicating the accuracy of latitude and longitude:

1. The measurement is accurate to ± 1 second. The site is accurately located on a topographic map and the coordinates were determined by digitizing or manual methods. This code is also applicable to locations determined by Global Positioning Systems having an accuracy of 100 feet or less.

2. The measurement is accurate to ± 5 seconds. Usually relegated to sites originally located on highway maps or large scale maps or with only fair location sketches. This code is also used for coordinates determined by Global Positioning Systems with an accuracy between 100 and 300 feet.

3. The measurement is accurate to ± 10 seconds. Location of site is only accurate to within about 1000 feet. Sites with poor sketches or locations taken off large scale maps that cannot be accurately plotted on topographic maps will fall within this category. This is a judgement call between codes two and three.

4. The measurement is accurate to ± 1 minute. Oil and gas tests not field located and some older wells without clear locations would fall in this category.

5. The latitude and longitude was taken from center of 2 1/2-minute quadrangle based on the state well number. This code is a temporary code that will be retired when wells that were registered in the old database system not requiring latitudes and longitudes are plotted on topographic maps and properly coded.

6. Temporary code that indicates the current latitude-longitude location does not fall within the 2 1/2-minute quadrangle as indicated by the state well number. This situation will be corrected as time permits.

OWNER IDENTIFICATION

The "owner's" record is used to record the ownership of the well. Two lines of 22 characters per line are provided to record the name of the owner. Enter the owner's name exactly as you would wish to see it in a published table, using appropriate capitalization and punctuation.

For multiple ownership, enter the last name of one owner followed by a space and an ampersand (&), and enter the last name of the second name. For more than two owners, use "and others" after entering last name of one owner. For ownership by a company, municipality, government agency, or other organizations, enter the official name of the entity. Use meaningful abbreviations to keep the name within 22 characters per line.

If the site is used, leased, or occupied by someone other than the owner, this fact could be entered in the REMARKS, together with the name of the user, lessee, or tenant. Do not put owner's address in this field.

DRILLER IDENTIFICATION

The “driller identification” record is used to record the name of the person or company who drilled and constructed the well. Two lines of 20 characters per line are provided to record the name of the driller.

Enter the driller's name (or company name) exactly as you wish to see it in a published table, using appropriate capitalization and punctuation. Use meaningful abbreviations to keep the name within 20 characters per line.

If the well was deepened or otherwise altered by a driller different than the original driller, make appropriate notation in REMARKS.

Do not put driller's address in this field.

DATE DRILLED

Enter the date drilled. If the day, month or year is not known, leave the spaces blank. Use leading zeros for month or day values less than 10. Enter 4 digits for the year.

WELL DEPTH

Depth: Enter depth of the completed well, in feet below land surface. The depth of the well is the greatest depth to which the well can be sounded; if measurement is not practicable, enter the reported depth at which the well was finished.

Source of Depth Data: Enter an appropriate code to indicate how the information about the well was The codes and their meanings are:

A - reported by another government agency (other than the agency submitting data). Do not use "A" if the reporting agency is the owner of the well -- use "0".

D - from drillers' log or well report.

G - private geologist-consultant or university associate.

L - depth interpreted from geophysical logs by personnel of source agency.

M - memory of owner, operator, driller. Depth data is undocumented.

0- reported by the owner of the well, where depth is certain or documented.

R- reported by person other than the owner, driller, or another government agency. This includes depths obtained from reports and publications where source of depth is unknown.

S- measured by personnel of reporting agency.

Z- other source (explain in remarks)

ALTITUDE AND METHOD OF MEASUREMENT

<u>Altitude</u>: Enter the altitude (elevation) of the land surface at the site, in feet above mean sea level.

<u>Source of Altitude Datum:</u> Enter the appropriate code for the method used to determine the altitude. There are

The codes and their meanings are:

A - altimeter

G - geographical positioning system (GPS)

L - level or other surveying method

M - interpolated from topographic map

Z - other

(Blank) - method unknown

AQUIFER CODE

The aquifer codes utilized by the Texas Ground Water Data System is adopted from U.S. Geological Survey's WATSTORE Data File. 'Me code consists of three digits designating the geologic Era, System, and Series followed by a four or five Alpha code designating the aquifer(s) or stratigraphic unit(s).

Example:

Era .... Cenozoic

System .... Tertiary

Series .... Eocene

Geologic Unit .... Vicksburg Fm.

1 2 3 V K G B

Appendix D lists the aquifers and hydrologic units for Texas both alphabetically and in aquifer code sequence. This field is mandatory to register a well into the database. To change an aquifer code already in the database, contact the database manager or his designated representatives.

AQUIFER ID

There are three fields for the Aquifer ID called Aquifer ID- 1, Aquifer ID-2, and Aquifer ID-3. These fields are 2 digit codes that represent one of the 30 major and minor aquifer groups. These groups, with their corresponding codes, are listed at the end of Appendix D. Aquifer ID- I is an mandatory field, Aquifer ID-2 and Aquifer ID-3 should only be used for wells that are combinations from different aquifer systems.

WELL TYPE

Well Type:. Enter the code indicating the principle use of the well or the purpose for which the well was constructed (the former always holds precedence over the latter). If the well is destroyed, make appropriate notations in the remarks. The codes are:

A - anode

C - repressurize

D - drain

E - geothermal

G seismic

H heat reservoir

M mine

O - observation

P -oil or gas

R - recharge

S - spring

T - test hole

W - withdrawal of water

X - waste disposal

Z - other

Meaning of Codes:

Anode (A) is a hole used as an electrical anode. Include in this category wells used solely to ground pipelines or electronic relays and installations.

Repressurize (C) refers to pumping water into aquifer in order to increase the pressure in the aquifer for a specific purpose, for example, water flood purposes in oil fields.

Drainage (D) means the drainage of surface water underground.

Geothermal (E) well is a hole drilled for geothermal energy development. Use this category for "dry" geothermal wells or wells in which water is injected for heating. For "wet" geothermal wells, through which water is withdrawn, use W - withdrawal of water for the use of site, and E - power generation for the primary use of water.

Seismic (G) hole is one drilled for seismic exploration. If it has been converted water supply, it is used to withdraw water. A seismic hole used as an observation well should be in the observation-well category.

Heat Reservoir (H) refers to a well in which a fluid is circulated in a closed system. Water is neither added to nor removed from the aquifer.

Mine (M) includes any tunnel, shaft, or other excavation constructed for the extraction of minerals.

Observation (0) well is a cased test hole or well drilled specifically for water-level or for water-quality observations. Do not use this category for an oil-test hole, or water supply well used only incidentally as an observation well.

Oil or Gas (P) well is any well or hole drilled in search of, or for production of, petroleum or gas and includes any oil or gas production well, dry . hole, core hole, injection well drilled for secondary recovery of oil, etc. An oil-test hole converted to a water supply well should be classified as withdrawal (W).

Recharge (R) site is a site specifically constructed for, or converted for, use in replenishing the aquifer. An irrigation well used to return water to the aquifer during nonpumping periods is a well for withdrawing water (W), not a drainage or recharge well. Use this category for wells that are used to return water to the aquifer after use, such as those for returning air-conditioning water.

Spring (S) is a natural surface discharge of underground water. The site may or may not be developed as a m supply. Indicate appropriate use of water, if any, under "Water Use".

Test Hole (T) is an uncased hole (or one cased only temporarily) that was drilled for water, or for geologic or hydrogeologic testing. It may be equipped temporarily with a pump in order to make a pumping test, but if the well is destroyed after testing is completed, it is still a test hole. A core drilled as a part of mining or quarrying exploration work, which is geologic, should be in this class.

Withdrawal of Water (W) refers to a site that supplies water for one of the purposes shown under use of water. It includes a dewatering well, if the dewatering is accomplished by pumping ground water.

A Waste-disposal (X) site is one used to convey industrial waste, domestic sewage, oil-field brine, mine drainage, radioactive waste, or other waste fluid into an underground zone. An oil test or deep water well converted to waste disposal should be in this category.

Other (Z) is a well or site that does not fit any of the above categories of 'well type".

USER CODE

The user code is assigned only to wells of public supply and industrial users which are inventoried annually by the Board concerning their water use. All wells belonging to a single user are assigned the same user number, thus enabling the compilation of information on all wells belonging to a given user(s) regardless of the well's location, date drilled, or aquifer completion. Enter the six-digit user code if applicable.

WELL CONSTRUCTION DATA

Method of Construction: Enter the code that best indicates the method by which the well was constructed. Codes are:

A - air rotary	P - air percussion
B - bored or augured	R - reverse rotary
C - cable-tool	T - trenching
D - dug	V - driven
H - hydraulic rotary	W - drive and wash
J - jetted	Z - other (explain in remarks)

Meaning of Codes:

Air rotary (A) method is one in which a stream of air is used to cool the bit and bring rock cuttings to the surface.

A bored or augured (B) hole is one in which the earth materials are cut and removed from the hole with an auger. The auger may be powered by hand or machinery.

Cable-tool (C) refers to a well drilled by the familiar "percussion" or "churn-drill" method whereby a heavy drilling tool is raised and lowered with enough force to pulverize the rock. The rock debris is commonly removed from the hole with a bailer. The California mud-scow method is a special variation of the cable tool method.

Dug (D) holes are excavated by hand tools or power-driven digging equipment. Caissons, Ranney-type collectors, and galleries belong in this classification even though they may have laterals that are driven jetted. Tunnels would also be in this category.

The hydraulic-rotary (H) well is constructed by rotation of a length of pipe (drill stem) equipped with a bit that cuts or grinds the rocks. Water or drilling mud is pumped down the drilling stem. Cuttings are carried to the surface in the annular space between the drilling stem and the wall of the hole. Note that separate categories are provided for air rotary and reverse rotary.

Jetted (J) wells are excavated by using high velocity streams of water pumped through a pipe having a restricted opening or "jetting" nozzle. For some types of earth materials, a cutting bit is attached to the end of the jetting pipe. The material cut or washed from the hole is carried to the surface in the annular space outside the pipe as the hydraulic-rotary method. This method is most suitable for construction of small-diameter wells in unconsolidated material.

An air-percussion (P) drill is a cutting tool powered by compressed air. It uses a rapid percussion effect, coupled with rotary action, to drill hard rocks. Compressed air also is used to blow the cuttings from the hole. Air-percussion drills are generally used in conjunction with air-rotary drilling rigs.

Reverse rotary (R) is similar to the hydraulic rotary except that the water or drilling mud flows down the annular space between the drilling stem and the wall of the hole and the cuttings are pumped out through the drill stem.

Trenching (T) refers to the construction of a sump or open pit from which ground water may be pumped. Trenching may be done by hand, but more commonly power equipment, such as a bulldozer, dragline, power shovel, or a back-hoe is used. Ponds and drains belong in this category of construction.

Driven (V) wells are constructed by driving a length of pipe, usually of small diameter and generally equipped with a sand point, to the desired depth. 'Me wells may be driven by hand, air hammer, or other power equipment. An essential feature of a driven well is that no earth material is removed as the well is constructed.

Drive and wash (W) wells are constructed by driving a small diameter open-end casing a few feet into the earth, then washing out the material from inside the casing with a jet of water. "Me process is repeated until the well has penetrated a sufficient depth into the aquifer.

Casing Materials: Enter the code indicating the material from which the casing is made. The codes and their meanings are:

B - brick	R - rock or stone
C - concrete	S - steel
D - copper	T - tile
G - galvanized iron	U - coated steel
I - wrought iron	W - wood
M - other metal	Z - other material (explain in remarks)
P - PVC, fiberglass, other plastic	

Screen Material: Enter the code indicating the type of material from which the screen or other open section is made. The codes and their meanings are:

B - brass or bronze	P - PVC, fiberglass, or other plastic
C - concrete	R - stainless steel
G - galvanized iron	S - steel

I - wrought iron	T - Tile
M - other metals	Z - other (explain in remarks)

Completion: Enter the code indicating the method of finish or the nature of the openings that allow water to enter the well. Allowable codes are:

C - porous concrete	S - screen
F - gravel pack w/perforations	T - sand
G - gravel pack w/screen	W - walled
H - horizontal gallery	X - open hole
O - open end	Z - other (explain in remarks)
P - perforated or slotted	

Meaning of codes:

Porous concrete (C) is concrete casing that is pervious enough to allow ground water to seep into the well.

A gravel-pack (F & G) well is drilled or dug well that has a gravel envelope opposite the part through which water enters. Commonly, these wells will be finished either with commercial screen or with slotted casing.

A horizontal gallery or collector (H) essentially is a horizontal type well which the screen, slotted pipe, or. gravel-filled trench is horizontal. All horizontal wells should be in this class, including Ranney collectors and infiltration galleries.

An open-end (0) well is one that is cased to the bottom of the hole so that water can enter the well only through the bottom of the hole.

Perforated or slotted (P) casing is well pipe that has had holes punched or slots cut in it to admit water. Do not use this designation if the well has a gravel pack. Use "F" instead.

Screen (S) refers to commercial well screen manufactured for the purpose of admitting water to a well. Common types of screen are wire mesh, wrapped trapezoidal wire, and shutter screen. Do not use this designation if the well also has a gravel pack. Use "G" instead.

A sand point (T) is the screen part of a drive point and usually is part of a driven well.

A walled or shored (W) well is usually a dug well in which the walls have been shored up with open jointed fieldstone, brick, tile, concrete blocks, wood cribbing, or other material. A few wells of this type may have gravel walls; however, they should be placed in this category instead of *F" or "G". A dug well that is mostly open hole but has even a few feet of cribbing, corrugated pipe, or other shoring to prevent caving should be in this category.

An open (X) hole well is one that has a finished open hole in the aquifer. A well belongs in this class even if the casing does not actually extend to the geologic unit or zone from which the water is obtained.

CASING AND SCREEN SETTING

This record is used to record the diameter of the casing and screen material installed in the well and the depths to the bottom of the cased and screened intervals. The term "screen" is used to mean the interval of openings through which water enters a well. This information should be entered in the same sequence as the material is set in the well, beginning with the topmost, and generally largest diameter, material.

Casing Screen: Enter the code indicating if the interval is cased, screened, or open hole. The codes are:

C - Casing

S - Screen (including all types of commercial screens, perforated casing, slotted casing, or other devices which function to hold the bore hole open and allows water to enter the well)

O - Open hole (bore hole interval contains neither casing or screen)

Diameter: Enter the diameter, in inches, of the casing or screen. If open hole, leave blank.

Top Depth: Enter the depth, in feet, of top of each cased, screened, or open hole interval.

Bottom Depth: Enter the depth, in feet, of the bottom of each cased, screened, or open hole interval.

LIFT DATA

The "lift" record contains information about the pump or lift used to bring water to the surface.

Type of lift: Enter the codes indicating the type of pump or lift. Allowable codes are:

A - airlift	R - rotary pump
B - bucket	S - submersible pump
C - centrifugal pump	T - turbine pump
J - jet pump	U - unknown
N - none	Z - other (explain in remarks)
P - piston	

Meaning of Codes:

Air Lift (A) is a type of list in which a jet of air pumped below the water table causes a stream of mixed air and water to issue from the well.

Bucket (B) includes the familiar "rope and bucket," chain and bucket lifts, and the smaller bailer lifted by a rope or chain and pulley.

Centrifugal (C) pumps have rotating impellers is a closed chamber that draws the water into the pump. The water is then discharged from the pump, commonly under great pressure, by centrifugal force. Such pumps have maximum lift of about 25 feet, but can force water to considerable heights above the pump.

Jet (J) pumps have two pipes extending from the pump into the well. One pipe forces water down the hole under pressure while the other pipe discharges water that has been forced to the surface by the action of the jet. Jet pumps are used principally for small water supplies, such as would be used for a suburban home, farm, or small commercial establishment.

None (N), no pump or lift installed.

Piston (P) pumps include the familiar lift and pitcher pumps common in many rural areas. The old reciprocating" pumps and the "deep-well with walking-bean jacks" are of the piston type.

Rotary (R) pumps operate on the principle that direct pressure is created by squeezing the water between specially designed runners. A relatively high vacuum may be created on the intake side so the suction lift is comparable to that for centrifugal pumps.

A submersible (S) pump is a special type of turbine in which an electric motor is connected directly to the impellers and submerged beneath the water. It can be recognized by the presence of insulated electric wire leading into the well and the absence of any pump or power unit at the surface.

Turbine (T) are of several types and may be either for a deep or shallow well. A series of impellers placed below the surface of the water, are rotated by a vertical shaft connected to a power source at the land surface. These impellers "pick up" the water and force it to the surface through the pump column. Such pumps are commonly used to lift large amounts of water at high pressure. They are used in high capacity wells for public, industrial, or irrigation supply.

Unknown (U) is used only if the site is equipped with a pump about which other data are available, but water the type of pump cannot be identified.

Other (Z). Place in this category any lifting device that does not belong in one of the other categories. Examples are: helical rotor, hydraulic ram, and siphon.

Type of Power: Enter the code indicating the type of power use to lift the water from the well. The codes and their meanings are:

D - diesel engine	N- natural-gas engine
E - electric motor	W- windmill
G - gasoline engine	Z- other (explain in remarks)
H - hand	(Blank)- no power source present
L - LP gas (propane or butane) engine	

Note: If no pump or lift device is installed, leave blank even if a power source is available at the well site.

Horsepower: Enter the horsepower rating of the primary power source. Two decimal places are provided for small motors. Enter 0.25, 0.50, or 0.75 for 1/4, 1/2, or 3/4 horsepower motors respectively

Example: 100 hp. = $\boxed{100}$

Example: 7 1/2 hp. = $\boxed{7.\ 5}$

Example: 3/4 hp. = $\boxed{0.75}$

WATER USE

Water Use: Record consisting of information pertaining to the use or uses of water from a well. The water may be used for a single purpose or for several purposes. This record allows entry of up to 3 uses of water for each well. The water-use codes are the same as those used by the U.S.G.S. WATSTORE Data System.

Primary Use: Enter the code indicating the primary purpose for which the water is used. If water is used only for one purpose, this use should be indicated as the primary use.

Secondary Use: If water from the well is used for more than one purpose, enter the code even though indicating the secondary use.

Tertiary Use: If water from the well is used for more than two purposes, enter the code indicating the tertiary use.

In cases of multiple use wells, it will often be a matter of judgement as to which use is primary, secondary, or tertiary. Allowable codes are:

A - air conditioning	I - irrigation	R - recreation
B - bottling	J - industrial (cooling)	S - stock
C - commercial	K - mining	T - institution
D - dewater	M - medicinal	U - unused
E - power	N - industrial	Y - desalination
F - fire	P - public supply	Z - other (explaining remarks)
H - domestic	Q - aquaculture	

Meaning of Codes:

Air conditioning (A) refers to water supply used solely or principally for heating or cooling a building. Water used to cool industrial machinery belongs in the industrial category, not in the air-conditioning category.

Bottling (B) refers to the storage of water in bottles and use of the water for potable purposes (see Medicinal).

Commercial (C) use refers to use by a business establishment that does not fabricate or produce a product. Filling stations and motels are examples of commercial establishments. If some product is manufactured, assembled, remodeled, or otherwise fabricated, use of water for that plant should be considered industrial even though the water is not used directly in the product or in the manufacturing of the product.

Dewatering (D) means the water is pumped for dewatering a construction or mining site, or to lower the water table for agricultural purposes. In this respect, it differs from a drainage well that is used to drain surface water underground. If the main purpose for which the water is withdrawn is to provide drainage, dewatering should be indicated even though the water may be discharged into an irrigation ditch and subsequently used to irrigate land.

Power generation (E) refers to use of water for generation of any type of power.

Fire protection (F) refers to the principle use of the water and should be indicated if the site was constructed principally for this purpose, even though the water may be used at times to supplement an industrial or defense supply, to irrigate a golf course, fill a swimming pool, or for some other use.

Domestic (H) use is water used to supply household needs, principally for drinking, cooking, washing, and sanitary purposes, but including watering a lawn and caring for a few pets. Most domestic wells will be at suburban or farm homes, but well supplying small quantities of water for domestic purposes for one classroom schools, turnpike gates, and similar installations, should be in the domestic category.

Irrigation (I) refers to the use of water to irrigate cultivated plants. Most irrigation sites will supply water for farm crops, but the category should include wells used to water the grounds of schools, industrial plants, or cemeteries if more than a small amount of water is pumped and that is the sole use of the water.

Industrial cooling (J) refers to a water supply used solely for industrial cooling.

Mining (K) refers to a water supply used solely for mining purposes.

Medicinal (M) refers to water purported to have therapeutic value. Water may be used for bathing and/or drinking. If use of water is mainly because of its claimed therapeutic value, use this category even though the water is bottled.

Industrial (N) use is within a plant that manufactures or fabricates a product. The water may or may not be incorporated into the product being manufactured. Industrial water may be used to cool machinery, to water provide sanitary facilities for employees, to air condition the plant, and to irrigate the ground at the plant.

Public Supply (P) use is water that is pumped and distributed to several homes. Such supplies may be owned by a municipality or community, a water district, or private concern. In most states, public supplies are regulated by departments of health, which enforce minimum safety and sanitary requirements. If the system supplies five or more homes, it should be considered a public supply; for four or fewer, classify use as domestic. Water supplies for trailer or summer camps with five or more living units should be in this category, but motels and hotels are classified as commercial. Most public supply systems also furnish water for a variety of other uses, such as industrial, institutional, and commercial. data

Aquaculture (Q) refers to a water supply used solely for aquaculture, such as fish farms.

Recreation (R) refers to water discharged into pools, or channels which are dammed downstream to form pools, for swimming, boating, fishing, ice rinks, and other recreational uses.

Stock (S) refers to the watering of livestock.

Institutional (T) refers to water used in the maintenance and operations of institutions such as- large schools, universities, hospitals, rest homes, or similar installations. Owners of institutions may be individuals, corporations, churches, or governmental units.

Unused (U) means water is not being removed from the site for one of the purposes described herein. A test hole, oil or gas well, recharge, drainage, observation, or waste-disposal well will be in this category. Do not use this classification for an irrigation, domestic, stock, or other well during "off season" or temporary periods of non-use. 'Me use of water from a newly constructed site should be considered as the use for which it is intended even though it may not yet be in use when inventoried.

Desalination (Y) refers to water used in a desalting process whereby dissolved solids are removed to make water potable or suitable for other uses. Enter the type of use of the desalinated water in the next column, Secondary Water Use.

Other (Z) refers to miscellaneous uses not included in the listed categories.

OTHER DATA AVAIIABLE

The Other Data Available fields are used to record the availability of certain geologic and/or hydrologic data associated with each well.

Water Level: Indicates the availability of water-level data for the well. Enter the proper code from the list below:

C - Current water-level observation well. The well is part of the statewide network in which the water level is monitored periodically, usually annually.

H - Historical water-level observation well. The well was measured periodically as part of the statewide monitoring network, but measurement of the well has been discontinued for some reason.

M - Miscellaneous water-level measurements. These measurements were made in wells not part of the statewide monitoring network. 'Me measurements represent, for the most part, data collected in support of various ground-water investigations and usually consist of one or two, but occasionally more, measurements. The dates of these measurements vary widely.

N - No water-level data available.

R - Automatic water-level recorder observation well. Every fifth-day measurement is included for most of these wells and are kept separate from C wells due to the large amount of data stored on each recorder.

Water Quality : Indicate the availability of one or more chemical analyses of water from the well. Enter the proper code from the list below:

Y - analysis is available

N - no analysis available

Logs: The log fields are used to enter information about the types of logs available for the well. Up to five entries may be entered in this field.

Enter the proper code or codes from the list below in any order:

A -drilling time	I -induction	Q- radioactive tracer
B -casing colar	J -gamma ray	S -sonic
C -caliper	K -dipmeter survey	T -temperature
D -drillers	L -lateral log	U -gamma-gamma
E -electric	M -microlog	V -fluid velocity
F -fluid-conductivity	N -neutron	Y - core
G - geologists or sample	O - microlateral log	Z - other
H - magnetic	P - photographic	

<u>Other Data</u>: These fields are used to indicate the availability of geologic and/or hydrologic data associated with the well not specifically listed previously. Enter the appropriate code (s) from the following list:

A -aquifer test

B - power-yield test

C - specific capacity

Z - other

DATE RECORD COLLECTED OR UPDATED

Enter the date the well was inventoried and data field checked, or well re-inventoried and record updated version. Use leading zeros for month or day values less than 10. Enter four digits for year.

Example:

0	**1**		**0**	**9**		**1**	**9**	**7**	**4**

REPORTING AGENCY

The reporting Agency is the agency that inventoried the well or reported the data. Enter the proper code from the following:

Texas Water Development Board……………………………...………………………………………………..01

(Texas Board of Water Engineers: 1913 – Jan. 30, 1962)

(Texas Water Commission: Jan 31, 1962 - Aug. 31, 1965)

REMARKS

The Remarks record is provided for entering meaningful data for which no specific field is available. Data in this field will be stored exactly as entered. Use this space to explain entries in the other fields of the well record and for any other pertinent comments about the well. The system provides for twenty (20) lines of thirty-five (35) characters per line "remarks" entry.

Examples of the type of information that may be entered in "remarks" include pump setting, pumping levels, reported and measured yields, cemented interval, underrearn data, owner's well number or well name, and history of alteration original well construction, such as deepening or plugging- Appendix C shows the suggested sequence of remarks statements. By everyone following this sequence, printed records of wells will be more uniform and "report ready."

WELL SCHEDULE IN TWDB FILES

A well schedule (record of well) form as shown on the following page, along with detailed well location information, is required before a permanent well number is assigned by the Texas Water Development Board. Any record appearing in this file without a back-up well schedule indicated should not be considered as reliable as those that do.

Codes are:

Y - Well schedule in files

N - Well schedule not in files.

WATER-LEVEL DATA

DEPTH OF WATER FROM LAND SURFACE (LSD)

Enter the actual Depth to Water measurement from land surface in this column. Be sure to adjust all depths from measuring point of each well to the land surface. All depths from land surface are entered into the system as negative values. In the case of flowing wells or where the water stands in the casing above land surface, this measurement above land surface is entered as a positive number.

The measuring point for each well is not stored in the system, but the value and current description of the M.P. should be kept current in field books.

DATE OF VISIT

The month, day, and year of each measurement should be entered as follows:

Examples:

March 7, 1932, enter as:	03	07	1932
January 14, 1963 enter as:	01	14	1963
October 19, 1965 enter as:	10	19	1965
January, 1946 enter as:	01	00	1946
1954, enter as:	00	00	1954

Be sure to enter all four digits for the year; 32 for 1932, 63 for 1963, etc. is not acceptable.

MEASUREMENT NUMBER

Entry in this column should be made for each measurement entered into the system. For more than one measurement per date, enter each measurement in chronological order on separate lines in column 2, "Depth to Water from LSD," repeat the measurement date in column 3 for each measurement and number the measurement 1,2,3,...99 in this column until all measurements entered for a particular date have been numbered.

MEASURING AGENCY

The code for the agency or other entity by which the measurer is employed should be entered in the designated column (column 5) when the water-level is measured. When entering measurements made previously by other entities, enter the code for the agency or entity that made the measurement. The codes and their definitions are as follows:

Texas Water Development Board and
Predecessor Agencies ……………………………………………………………..………...…...01

Code Numbers 13 through 40 are reserved for expansion.

METHOD OF MEASURING

The code indicating the method used to measure the water level should be entered with each measurement. Codes indicating method of measuring are as follows:

Steel Tape ..……………………………………………………………………...…….1

Electric Line………….………………………………………………………………….2

Air Line…………………………………………………………………………………..3

Recorder…………………………………………………………………………………4

Pressure Gap (or other device used to measure piezometric head on flowing wells….5

Logging Sonde…………………………………………………………………………...6

Code number 10 is reserved for future use.

VISIT MARK

P – Publishable – The measurer determines that the water-level is indicative of the aquifer's piezometric surface.

N – Not publishable – The measurer determines that the water level is not indicative of the aquifer's piezometric surface or no measurement was obtained.

The visit mark is a mandatory field.

REMARKS

Enter the appropriate "Remark" code for each well visit. The codes and their definitions are as follows:

Measurement good. No unusual conditions noted at or near well site ……………………………….(Blank)

"Remarks" not recorded for data collected before 1961.

Measurement judged to accurately reflect water-level conditions 01

Well pumping (pumping-level measurement) 02

Well or wells pumping nearby.. 03

Well pumped recently 04

Well located in area subject to flooding. Water level possibly affected by recent flooding conditions 05

Measurement may reflect perched water table 06

Artificial recharge operation at or near well 07

Measurement deviation may be due to well work-over and/or re-completion in different zone 08

Reserve codes 09 thru 19 for future expansion

Questionable measurement, inconsistent or spotty tape mark
due to wet or leaking casing, or open hole conditions……………………………………20

Questionable measurement, leaking or probable leaking airline
Leaking shut-in connection (flowing well) 21

Questionable measurement, measurer uncertain of reason 22

Questionable measurement, deleted from record after review 23

Questionable measurement, measurement may be from another well 24

Questionable measurement, tape does not fall free in well 25

Questionable measurement, inconsistent or spotty tape due to oil
or gasoline on top of the water 26

Reserve codes 27 thru 39 for future expansion

No measurement - well destroyed 40

No measurement - well pumping 41

No measurement - unable to insert tape or E-line into well bore……………………………………….. 42

No measurement - unable to reach water level with measuring equipment at hand 43

No measurement - tape or E-line hangs 44

No measurement - well apparently bridged or caved, unable to reach water 45

No measurement - unable to reach water, well apparently dry; well depth reached
without finding water level 46

No measurement - casing leaking or wet 47

No measurement - airline leaking or shut in connection leaking in case of flowing wells 48

No measurement - well flowing and unable to shut-in 50

No measurement - no reason stated (outside source) 51

Reserve 52 thru 59 for future expansion

No measurement - unable to locate well. Location description inadequate …………………………………60

No measurement - well site temporarily inaccessible. (impassable roads,
locked gate, locked pumphouse, etc. 61

No measurement - well site temporarily inaccessible. (vicious animals) 62

No measurement - access to well bore temporarily blocked
(well winterized, covered, or contains debris which prevents- measurements) 63

Well deleted from current water-level program. Well owner does not want well measured 64

Well deleted from current water-level observation problem due to continuing hazardous
conditions to measurer (enter specifics on well schedule) 65

Reserve 66 through 79 for future expansion

Measurement of well discontinued, no reason stated.
Note: use when recording data from outside source …………………………………………80

Well deleted from current water-level observation program;
Well not needed or unsatisfactory for monitoring purposes……………………………………81

No measurement of this current water-level observation well due to staff work-loan
or other priorities (administrative decision)……………………………………………………82

Reserve 83 through 99 for future expansion.

DATE COLLECTED

Enter date that the sample was collected, which is usually different than the date analyzed. However, if the laboratory date is all that is available, use it.

Enter Date:

0	7	2	1	1	9	8	8
1	0	0	0	1	9	6	0

SAMPLE NUMBER

If only one analysis is available for a well sampled on a particular date, then a one (1) has to be placed in this field. For wells sampled more than once in one day, each analysis will be numbered consecutively in this field up to nine analyses taken on the same day.

TIME

Enter the time of day the sample was taken. This field also allows the sampler, when taking more than one sample in a day, to record the time between sampling intervals. In order to distinguish between A.M. and P.M., a 24-hour clock will be used.

Enter the time as in following examples:

8:45A.M.	0	8	4	5
4:21A.M.	1	6	2	1

SAMPLE COLLECTION AGENCY

Enter the appropriate code for the agency collecting the sample.

Sample Collection Agency Codes:

20 Other or Identity Unknown

TEMPERATURE

Enter the temperature in degrees Celsius as in the following example:

8°	**-**	**0**	**8**
16°	**-**	**1**	**6**
21.7°	**-**	**2**	**2**

Should the need arise to have degrees Fahrenheit or both -C and 9F to several decimal places, the appropriate entry can be made on the Infrequent Constituent Table as follows:

Description	Storet Code	Units	Value
Celcius	00010	DEG	22.4
Fahrenheit	00011	DEG	69

ANALYSIS RELIABILITY REMARK

Blank	Reliability unknown, not available, or not yet entered into database
01.	Sample collected from tank, distribution, or bailed from well. Not indicative of aquifer quality. Data should be used carefully.
02.	Sample collected from well not sufficiently pumped; and not filtered or preserved. Data should still be used carefully.
03	Sample collected from well sufficiently pumped but not filtered or preserved. Holding time probably not honored.
04.	Chemical analysis taken from a report. Sample collection and preservation procedures unknown.
05.	07Not currently being used.
08.	Sample filtered in the field. Temperature, conductivity, and pH measured in the field. Alkalinity measured in the lab. Nutrient sample not preserved and included in anion sub-sample. Sample kept cold until delivered to the lab.
09.	Same as #8, but not filtered in the field.
10.	Sampled in accordance with the TWDB's ***A Field Manual for Ground-Water Sampling,*** 1990**.** Samples are collected when temperature, conductivity, and pH have stabilized. The sample was filtered and field tested for alkalinity. Samples are preserved as applicable, kept chilled, and delivered to the lab. Holding times are honored. Organic sub-samples are not filtered.
11.	Same as #10 but not filtered
12.	Sample collected by TNRCC staff following prescribed project QA-QC procedures.
13.	Cation sample preserved and run thru TDH lab. Anion and nutrient sub-samples sent to lab at Texas Tech Univ. and ran within 24 hours. Field tests completed as described in #10.
14.	Similar to #10 but sample results determined by using a Hach DR-2000 lab.
15.	Collection procedures not documented, results obtained by use of a Ground Water District's Hach equipment.
16.	Sample collected by USGS for NAWQA program utilizing the "Clean Sample" technique.
17 ETC.	To be utilized as water-sample collection procedures are modified.

AQUIFER/PRODUCING INTERVAL

These fields were intended to be used ONLY if aquifer and/or producing interval is different from the completed well. Some examples are as follows:

1. A 1,600 ft. Twin Mountains well completed from 1,450 to 1,600 feet had a chemical analysis run on a sample from the Paluxy Formation between 800 and 920 feet.

AQUIFER | **PRODUCING** | **INTERVAL**

2	**1**	**8**	**P**	**L**	**X**	**Y**	

0	**9**	**0**	**0**
TOP			

0	**9**	**2**	**0**
BOTTOM			

2. A chemical analysis run on a sample from a well completed in the Hueco Bolson indicated bad water from 800 to 920 ft., and the well was plugged back to 800 feet.

AQUIFER | **PRODUCING** | **INTERVAL**

0	**8**	**0**	**0**
TOP			

0	**9**	**2**	**0**
BOTTOM			

REMARKS

This field allows up to 30 alpha-numeric characters to be entered that would allow the sampler to record data pertinent to that sample. Examples of some remarks are as follows:

1. Well Pumping For 3 Hours
2. Rotten Egg Odor
3. Sample Has Reddish Color

INFREQUENT CONSTITUENT DATA ENTRY

Enter the storet code in the field provided on the Infrequent Constituent screen. Storet code descriptions are 6ontained in Appendix F. With each storet code, only one specific unit can be used. For example, iron is recorded in UG/Ls. Make sure the value entered from the lab report reflects the same unit of measure as is required in the Storet Dictionary (App. F).

The flag field is provided for < (less than) and > (greater than) symbols, as necessary.

The confidence interval field, preceded by + **-** symbol, is usually used when entering radioactivity values.

APPENDIX E

RIVER BASINS AND ZONES

Texas has 23 river and coastal basins. Each basin has been subdivided into homogenous sub-areas or "zones to facilitate presentation of information and planning analysis. Each basin contains 1 to 6 zones.

River Basin: Enter the numerical code for the river basin in which the well is located. The basins and their respective numbers are listed as follows:

WATERSHED	**CODE**	**WATERSHED**	**CODE**
Canadian River	01	Brazos-Colorado Rivers	13
Red River	02	Colorado River	14
Sulphur River	03	Colorado-Lavaca Rivers	15
Cypress River	04	Lavaca River	16
Sabine River	05	Lavaca-Guadalupe River	17
Neches River	06	Guadalupe River	18
Neches-Trinity Rivers	07	San Antonio River	19
Trinity River	08	San Antonio-Nueces River	20
Trinity-San Jacinto River	09	Nueces River	21
San Jacinto River	10	Nueces-Rio Grande River	22
San Jacinto-Brazos Rivers	11	Rio Grande River	23
Brazos River	12		

River Basin Zone: Enter the numerical code for the river basin zone in which the well is located. The river basins and zones are shown on the following map:
